

# CLOUD MIGRATION ASSESSMENT WITH PROOF-OF-CONCEPT

## WHICH LEADING CLOUD PROVIDER IS THE BEST FIT FOR YOUR BUSINESS'S SPECIFIC NEEDS?

The cloud has many benefits—self-service, accessibility, scalability, security, cost benefits, and compliance features are just a few—but migrating to the cloud can be daunting. Which cloud platform is a better fit for your web applications and business needs? How do they differ in terms of reliability, licensing, price, and support for your other platforms and tools?

## PROCESS AND DELIVERABLES

In a 2-4 week engagement, AIM Consulting can work with stakeholders in your organization to review the current posture of an on premise implementation and provide guidance on migrating various components into the cloud infrastructure best aligned to your needs with minimal risk and downtime.

- 1** Conduct a situational-specific assessment of your application and environment.
- 2** Present a solution design document and migration roadmap with reference diagrams of the current state against best practices.
- 3** Select an appropriate proof-of-concept application or service for trial migration.
- 4** Perform the proof-of-concept migration, document lessons learned, and update the migration roadmap.
- 5** Facilitate the migration components in the updated migration roadmap.

### OUR EXPERTISE

- Application Development
- Data and Analytics
- Delivery Leadership
- Digital Experience and Mobile
- Infrastructure, Cloud and ESM
